

AIA VOICE INSIGHTS

From customer conversation to agent action

PRE-READ FOR THE EXECUTIVE COMMITTEE

The business case in two slides

5-minute read

One idea sits behind both slides. Every customer conversation holds what decides whether a family is protected well: who depends on whom, what worries them, what they can afford. Today some agents record it on paper, others key it into i-PoS, our point-of-sale system. Either way, **they type it all from memory, after the meeting**, so the record is late, uneven and only as good as what the agent can recall.

Voice Insights is a next-generation system: it turns the conversation itself into structured insight and ready-to-review documents within about half a minute, in English, Mandarin, Malay or Tamil. Agents check and correct instead of typing from memory, and spend their time with customers instead of with forms. AIA Singapore gains an advice process that is consistent, visible and better documented across the whole agency force.

The two slides at a glance

	Slide 1 · Our agents	Slide 2 · AIA Singapore
Message	Agents get their evenings back, and customers get a better conversation.	A consistent, visible, compliant advice process across every agent, at well under one dollar a conversation.
Core gains	Time back · better conversations · fewer missed needs · safer advice · every customer in their own language	Productivity · quality · early compliance · revenue upside · leadership visibility · brand trust

What makes it next generation

Paper and point-of-sale entry record what an agent remembers. Voice Insights is built to make the agent's work simpler at every step, with innovations that no form can offer:

Innovation	What it does for the agent
Listens, so nobody types	Captures the real conversation, including mixed English and Mandarin, in four languages
A live picture of the customer	Family, hopes and worries build on screen as the customer speaks, each tied to their own words
A team of specialist AI reviewers	Needs, risk and affordability are assessed together in seconds, with the evidence shown
A voice-first debrief partner	Talk through the meeting; it reads back what it understood and asks only about what is missing
Ask, explore, rehearse	Question the analysis by voice, try "what if…?" changes, and practise the next meeting with a coach
Paperwork drafted, hands-free	Fact-find, record of advice, follow-up and CRM note arrive as drafts; reports can be read aloud on the move

What we ask the Committee to take away

1. **Agents win first.** If it saves them time and makes them better in the room, adoption follows, and company value follows adoption.
2. **The company benefit is broader than time saved.** Quality, compliance, conversion, visibility and brand are where the larger value lies.
3. **The numbers must be AIA's own.** The illustrations show how value is built; measurement turns them into a business case.

SLIDE 1

What our insurance agents gain

“Agents get their evenings back, and customers get a better conversation.”

The agent’s week, before and after

	Today	With Voice Insights
After the meeting	Paper notes, or typing into i-PoS field by field, entirely from memory: notes, fact-find, record of advice, follow-up message, CRM entry	Drafts of all five are ready to review; the agent checks and corrects instead of re-typing
What was said	Rebuilt from memory onto paper or i-PoS; a child’s age or a budget can be lost	Captured from the conversation, with the customer’s own words kept as evidence
What was missed	Found at the next meeting, or never, because forms record answers, not gaps	Listed straight away as “still to ask”, so the next conversation starts with the right questions
Customer follow-up	Days later, in whatever time is left	The same day, in the customer’s preferred language
Confidence in advice	Rests on experience and recall	Every suggestion shows its reasons, concerns and the product wording behind it

Five gains, in the agent’s own terms

1. **More time to sell and to serve.** Re-typing from memory, onto paper or into i-PoS, shrinks from a long evening task to a short review. The time goes to more customer meetings, or to a better working week.
2. **Better conversations in the room.** A live view of the customer’s family, hopes and worries builds as they speak, and the next best question is suggested. Newer agents gain a senior colleague’s instinct.
3. **Fewer missed needs, fewer missed opportunities.** The same structured view is built for every customer, surfacing gaps an agent might not raise: a spouse with no cover, children’s education, a home loan.
4. **Safer, more confident advice.** A statement that could breach conduct rules, such as a promise of returns, is flagged as it is made, not weeks later in a file review. Agents protect their licence and reputation.
5. **Every customer in their own language.** Brief and follow up in the language the customer is comfortable with, without extra effort, in a market where family decisions are often made in Mandarin, Malay or Tamil.

A simpler way of working, not another system to feed

Voice Insights is a next-generation tool built around how agents actually work. The agent talks; the system listens, structures and drafts. Voice replaces typing, a live customer picture replaces remembering, and prompts replace guessing what to ask next.

What it means for income and career

	Effect
Productivity	More customer-facing time each week from the same working hours
Quality	A fuller record of each customer, supporting stronger, longer relationships and better persistency
Growth	New agents reach competence faster, because structure and prompts are always at hand
Retention	A role less weighed down by paperwork is a better reason to stay

> *“An agent finishes a meeting and, within about half a minute, has a full suggestion with reasons and a follow-up draft to review.”*
>
> OBSERVED IN THE WORKING PROTOTYPE

Suggested visual: one agent’s week before and after, with the same hours, the admin block shrunk and the customer-time block widened; beside it, one product screen showing the customer’s picture building during a conversation.

SLIDE 2

What AIA Singapore gains

“A consistent, visible, compliant advice process across every agent, at well under one dollar a conversation.”

Six gains for the company

Gain	What changes for AIA
1 · Agent productivity at scale	Hours returned to customer work across the whole agency force, without adding headcount
2 · Quality and consistency	Every conversation is analysed to the same standard, so advice quality no longer depends on which agent a customer meets
3 · Compliance caught early	Risky statements and missing disclosures are visible during or straight after the conversation, not in a later file review; evidence for each suggestion is kept
4 · Revenue and conversion upside	Faster follow-up, fewer missed needs and better-prepared next meetings lift conversion and protection per customer
5 · Leadership visibility	A live view of how many conversations happen, which needs come up, how customers feel, and how long it takes to go from meeting to advice
6 · Brand and customer trust	A fuller, more accurate record and faster multilingual service strengthen AIA as the advisor customers choose

The financial logic, kept simple

Value = agents using it × cases per agent × admin time saved per case × value of an hour

Plus the uplift from better conversion and fewer compliance incidents.

Illustration	Example value
Admin time saved per case	45 minutes
Cases per agent per month	8
Time returned per agent per month	**6 hours**
Per 100 agents	600 hours a month, about 3.75 full-time equivalents

Read this as an illustration, not a forecast. The 45 minutes and 8 cases are planning assumptions. The first step is to measure how long agents really spend today, so every figure shown to the Committee rests on AIA’s own numbers.

- **Running cost:** estimated at about SGD 0.35–0.60 per conversation in AI usage, to be confirmed against AIA’s agreements, set against the value of the agent time returned.
- **Value beyond time:** a single avoided conduct incident, or a small lift in conversion, may outweigh the time saving.

Strategic position

- **Differentiation:** a faster, multilingual, better-documented agency force is hard for others to copy quickly.
- **Next generation, not another form:** voice-first capture, live insight and drafted paperwork replace manual entry from memory, whether on paper or in i-PoS.
- **A platform, not a point tool:** the same conversation intelligence can later support coaching, product feedback and new-agent onboarding.
- **Insight from the market:** anonymised patterns in what customers ask and worry about show where product and campaign opportunities lie.

“Leadership sees the quality and risk of every conversation in one view, instead of one sampled file at a time.”

THE CHANGE FOR LEADERSHIP

FAQ

Question	Short answer
Will agents actually use it?	The value to them is immediate: less typing and better customer conversations. Adoption is the first thing to measure.
How is this different from i-PoS or paper?	Those record what the agent types from memory after the meeting. Voice Insights captures the conversation itself and drafts the records, so the agent reviews instead of re-typing.
Is the saving real, or assumed?	Assumed in the illustration above. It is to be measured with a sample of agents before any commitment is made.
What does it do for compliance, honestly?	It brings risk to light earlier and keeps the evidence behind each suggestion. It supports the compliance function; it does not replace it.
Does it help revenue, or only cost?	Both. Time returned to selling and fewer missed needs are revenue levers; compliance and rework are cost levers.
What is the downside of waiting?	Agent time keeps going to paperwork, follow-up stays slow and uneven, and risk is still found late. The value above is deferred, not lost.

Figures marked as illustrations, estimates or assumptions are planning inputs to be confirmed with Finance, Compliance and a baseline measurement. Product behaviour described here was observed in the current working prototype.
